

**ANONYMIZED REGISTRATION DATA
OF THE INTERNATIONAL CONGRESSES OF MATHEMATICAL PHYSICS
FROM 2012 TO 2021**

Serena Cenatiempo^{a)} and Simone Rademacher^{b)}

^{a)} Gran Sasso Science Institute, L'Aquila, Italy

^{b)} Institute of Science and Technology Austria, Klosterneuburg, Austria

The files available at this page contain the anonymized registration data of the last four International Congresses of Mathematical Physics (ICMPs) from 2012 to 2021. We are grateful to the ICMPs' organizers for providing us the registration data for the congresses.

The full registration data contains the participants' first and last name, their academic position, their affiliated institution and their gender. Of note is that the registration forms considered gender as a binary question. For this reason, the anonymized data made available here, differs between male and female gender only. We are aware that this does not represent the whole spectrum of gender. We are looking forward for more refined registration forms and data in the future.

The anonymized data provided here includes participants affiliated to universities or other scientific or research institutions only. Thus, the present data does not include participants affiliated to publishing houses etc. or registered as visitors. Any data set of the anonymized registration data contains the following *four* information of the participants:

- (1) With *Academic status*, we refer to the academic position a participant registered with. For data sets with no indication, we assign an academic status based on search in the web. Of note is that i) Students include bachelor, master and graduate students; ii) Doctors include early stage postdocs, tenure-track or non tenure-track assistant professors, and researchers with permanent positions; iii) and Professors include professors and directors of research.
- (2) With *Country* resp (3) *Continent*, we refer to the country (resp. continent) a participant's institution is located. For incomplete data sets we assign an institution to the participant based on search in the web.
- (4) With *Gender*, we refer to the binary gender a participant registered with. In case the registration data contains the formal title, we assign to the title "Ms" the female and to the title "Mr" the male gender. For data sets with none of these indications, we assign a binary gender based on the first name. We are aware that any of these assignments neglect the diverse spectrum of gender. We are looking forward for more detailed discussions in the future.

Acknowledgements. We would like to warmly thank Rafael Benguria, Vojkan Jaksic, Arne Jensen and Benjamin Schlein for providing us the registration data to the different ICMPs and Dorothea Bahns, Michael Loss, Bruno Nachtergaele and Sylvia Serfaty for making the anonymized data available here.
